Overview

Multi-environment applications

KwickScreen® helps manage space within hospitals, residential environments and primary care settings such as GP surgeries, dental practices and community healthcare facilities. Available fixed, portable and in a choice of finishes. KwickScreen® enables privacy, displaying messages or images, keeping

patients engaged in ward activity, while isolating non-airborne infections. KwickScreen® uses a patented high-tech rollable material technology that enables it to be incredibly retractable and portable. RolaTube™ is a new British technology used across many sectors including Nasa.

Retractable room-dividers with your choice of print

Portable or wall-mounted options available

“KwickScreens are really versatile and help us manage our space. They can be portable or fixed to the wall, they bend around corners and it’s easy to change the inner screens.”

Samantha Martin, Peri Operative Matron, Kings College Hospital

KwickScreen®’s versatility is proving invaluable in many healthcare environments and is already in use in over 75 NHS Trusts, hospitals in Europe, the Middle East, America and Canada.

- Infection Control – sections off areas for isolation
- Creates Privacy & Dignity – addresses single-sex breaches
- Easy for one person use
- Retracts for storage
- Small footprint when in use
- Easy to clean and clean around. Smooth wipe clean paint finish
- Extends up to 3.3m wide x 1.9m high and can bend up to 180 degrees at any width
- Clinical trials show improved hand-hygiene compliance
- Panel available in a variety of finishes; opaque, translucent, transparent or printable with a choice of graphics
- Replaceable inner screen
- Quality castors with directional locking for stability

Features & Benefits

- Wall fixed or portable options available
- The portable KwickScreen® is easy to wheel about
- One person use
- Pulls out and retracts to any length up to 3.3m
- Robust and durable
- Bends up to 180 degrees at any point of the width

Wall fixed

Portable

Cost savings

- Improves bedstock management by freeing up side-rooms
- Helps prevent breaches of Privacy & Dignity

Easy cleaning

- Specially designed to be easily steam or wipe cleaned
- Easy to clean floor underneath as frame is self supported
- Inner screens can be easily replaced

Small footprint

- Retracts into compact casing space for storage
- Self supported frame, leaving floor space free
- Stores away easily

Good for patients

- Reduces the need to move patients to different rooms or wards
- Isolation screen avoids stigmatising patients on a ward/maintains full visibility
- Privacy screen gives patients or visitors their own designated space
- Less claustrophobic feel

“*Research shows that each KwickScreen saves about £7,500 per year through superior bedstock management.*”

ABA Independent Healthcare Economists

Infection Control

With a lack of side rooms available in many hospitals across the NHS, outbreaks of non-airborne infections including MRSA and Norovirus can prove a costly problem. Generally, infected patients do not need to be placed in side rooms and only require a physical barrier between bed spaces to prevent transmission through droplets.

The KwickScreen® provides both a physical barrier around the infected patient and a psychological trigger that has been proven to improve hand hygiene compliance.

“ *Clinical trials have shown that KwickScreens significantly improve hand-hygiene compliance.* ”

Dr. Peter Wilson, Consultant Micro-Biologist at University College London Hospital, NHS Foundation Trust

KwickScreen® provides the solution

- Allows separation of infected areas within a ward
- Isolates non-airborne infections in the ward
- Provides visibility and isolation
- Improves hand hygiene compliance and prevents cross-bed traffic
- Low levels of patient stigmatisation
- Hygiene units for hand gel, gloves and gowns available
- Easy to clean, small storage footprint when not in use

Newham Hospital has installed KwickScreen® wall fixed screens with bespoke photography throughout the new A&E Department.

Privacy & Dignity

It's often hard to avoid patients of different sexes being treated together, which causes problems with patient privacy and dignity. A number of environments within hospitals and other healthcare facilities have a lack of space or dated building design and layout making segregating different sexes difficult.

Not only does the KwickScreen® aid space management in hospital wards and waiting areas, it's also ideal for addressing single-sex breaches.

KwickScreen® provides the solution

- Allows reconfiguration of wards to ensure segregation of male and female patients
- Avoids the need for costly structural changes
- Instant deployment
- Looks like a temporary wall but works like a curtain
- Portable, quick and easy to rearrange layouts in any ward size
- Easy to clean, small storage footprint when not in use

“*The KwickScreen provides a good short-term solution to MSA issues whilst a permanent fix is being planned.*”

NHS London

KwickScreen® provides privacy and dignity

KwickScreen® achieving flexible single-sex accommodation

Print Options

KwickScreen® is available in 3 finishes, opaque, transparent or translucent, all of which can be printed. Choose from stock print designs or bespoke options.

Photography, vector illustrations or paintings can be printed in high quality on the inner panel of a KwickScreen®, to create a different ambience on your wards.

Using art in healthcare is gaining growing recognition as a means for improving the healthcare process and environment.

Several studies both in Europe and the United States have shown the great many benefits offered to patients, staff and visitors by art.

Art in healthcare can provide psychological, physiological and biological benefits to the patient and reduce anxiety and depression, especially in preoperative stages.

KwickScreen® Bespoke

Teal commission internationally recognised artists to create a unique design, printed onto the KwickScreen® inner panels.

FAQ's

When are Privacy & Dignity KwickScreens® used?

White opaque screens help provide single sex accommodation in mixed wards. Portable screens can be used flexibly to segregate areas in a ward and provide private and dignified spaces.

When are Infection Isolation KwickScreens® used?

Transparent screens help facilitate cohort nursing by preventing traffic between bed-spaces. This frees-up side rooms, patient movement is reduced and hand-hygiene compliance and overall bed utilisation improves.

Can the screen graphic be changed?

The inner screen section is replaceable, so if it gets damaged or if you want to use a different screen, a new screen can be swapped in easily at little cost.

How should the KwickScreen® be cleaned?

Microbiological tests have shown that KwickScreen® can be cleaned thoroughly with a chlorine-water mix or standard hospital cleaning wipes. The flat smooth screen surface makes it perfect for steam cleaning and all components are compatible with hydrogen peroxide vapour.

Awards & Accreditations

The KwickScreen® is supported by The NHS National Innovation Centre, The Department of Health and The Health Protection Agency.

2012 Winner of BBH Award for Productivity

Options & Accessories
